

Cloud TnA WEB

Manual

1.1. Introduction

We would like to thank you for your trust in our system for time and attendance. We would like to emphasize that in our application integrated advanced functions for the automatic detection of the shift, which can be proud of only a small number of competing programs for time and attendance. More about the automatic detection of shifts will be discussed in the chapter in which we will describe reports. We hope that the first effects of our system in your business will be visible and measurable as soon as possible. With the wish that this instruction lead you easily and quickly into the basics of using our web applications let's move on to point .

To start using the TNA applications it is necessary to fill in the application at:

<http://time-n-attendance.com/sign/>

After filling in a simple registration form, you should follow the link that will be sent on the email that you signed up when completing the registration.

1.2. Log in

Launching TNA online application opens a panel which allows the user to login. It is necessary to correctly fill in the required information and then, click the button **Log in** to access TnA application.

Image 1: Log in

1.3. Navigatio

After a successful login loading you will see first page of Web applications. The main navigation is done using the horizontal menu at the top of the page that contains the following options:

Image 2: Navigatio

The choice from one of the options open to the vertical submenus that enable further navigation and selection options.

2.1. Administratio

In this menu are enabled to create and edit data about users, and set options for devices that are added to the TNA system.

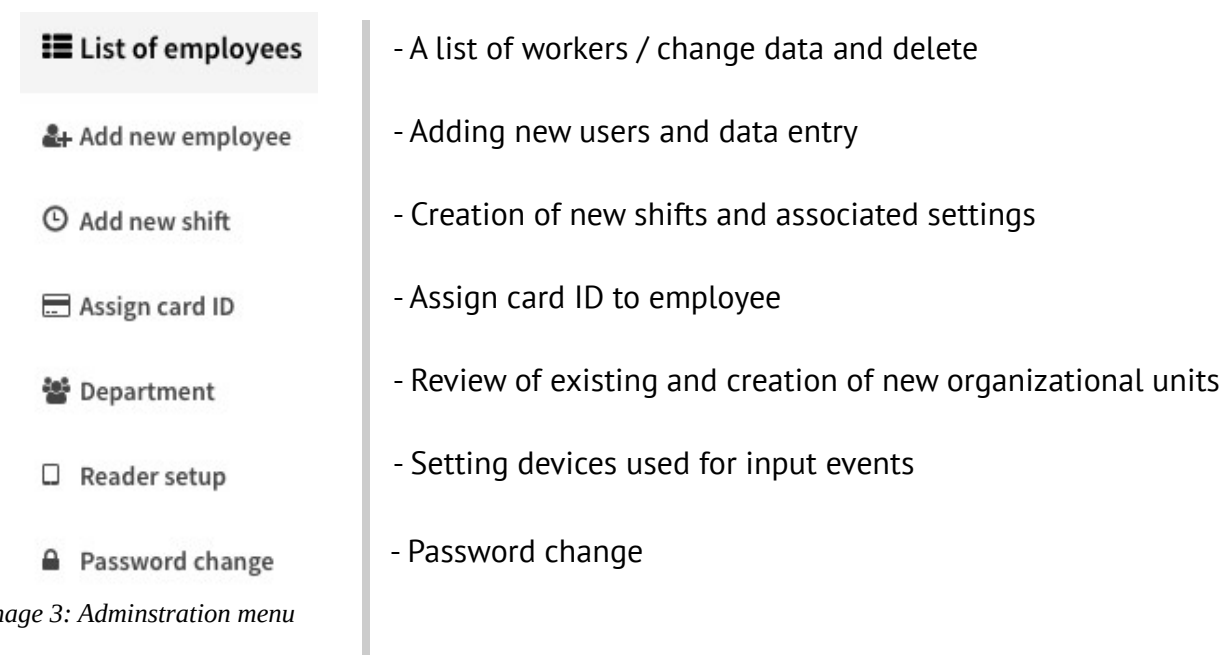

Image 3: Adminstration menu

2.2. List of employees

Under this option it is possible to view of all users entered into the system as well as their basic data.

The screenshot shows the 'List of employees' page in the TNA application. The sidebar on the left contains the following options: List of employees (selected), Add new employee, Add new shift, Assign card ID, Department, Reader setup, and Password change. The main content area is titled 'List of employees' and contains a table with the following data:

No.	Photo	Name	Surname	Username	Card number	Edit	Delete
1.		Christopher	Williams	Christopher	1181900549204864		
2.		Melissa	Moore	Melissa	1274639901078144		
3.		Eric	Simpson	Eric	1682970880		

At the bottom of the main area, there are two buttons: 'Send Log' and 'Logout'.

Image 4: List of employees

Edit By selecting "Edit" comes to the window which allows easy modification and addition of data about individual users.

Delete option to delete users from the database. In order to perform requires further confirmation is needed, eliminating the possibility of error when deleting.

2.3. Adding new users

With this option, you will be able to entry of new employees whose working hours are recorded. In addition to input personal details (name, registration number, etc.) In this menu, there is an optional possibility of adding images of users, as well as the setting shifts .

Entered data into the form to be successfully entered into the database it is necessary to do the verification by clicking on the button "**submit**".

The screenshot displays the TNA web application interface. On the left is a sidebar menu with options: List of employees, Add new employee (selected), Add new shift, Assign card ID, Department, Reader setup, and Password change. The main content area is titled 'Add new employee' and contains two sections.

Add new employee section:

- Employee data:** Includes a photo upload area (Add user photo: Browse...) and a form with the following fields:
 - Username: *
 - Name: *
 - Middle name:
 - Surname: *
 - Phone:
 - Address:
 - Web address:
 - Identification number:
 - Email:
 - Card number: *
 - Password: *
 - Confirm password: *
 - Department: (Dropdown menu showing 'Unassigned')
- Submit button:** An orange button at the bottom right of the form.

Adding shifts for an employee section:

- Shift selection:** Includes 'Available shifts' (Nothing select), 'Working days' (Monday through Sunday checkboxes), and 'Added shifts' (a list box).
- Date selection:** Includes 'Applied from' and 'Applied to' date pickers, both set to 'December 2015'. Below each picker is a calendar grid showing days of the week (Su, Mo, Tu, We, Th, Fr, Sa) and dates.
- Submit button:** An orange button at the bottom right of the section.
- Footer:** A green bar at the bottom contains 'Send Log »' and 'Logout »'.

Image 5: Add new user

The table at the bottom of the window is used to adjust the shifts that are assigned to the worker and parameters such as initial and the final date of application of shifts and days of the week for which the given rule applies. If adding a new user you did not define the shift in which it operates, it can always be done within the option **list of employees** . In order to successfully enter data recorded in the database is also necessary to confirm the changes with click on the button "**submit**".

2.4. Add new shift

This is part of the application for creating and configure a new shifts. When creating a new shift defines the term as well as the duration of the shift (start and end of shifts). Under this option it is possible to pass parameters related to the use of breaks during shift.

The screenshot displays the 'Add new shift' interface. On the left, a sidebar lists navigation options: 'List of employees', 'Add new employee', 'Add new shift' (selected), 'Assign card ID', 'Department', 'Reader setup', and 'Password change'. The main area features a green header with 'ADMINISTRATION', 'EVENTS', and 'REPORTS' tabs. Below the header, the 'Add new shift' form is visible. It includes a 'Shift details' section with a text input for 'Name of the shift', and two time pickers for 'Start of shift' and 'End of shift', both currently set to 10:40. A checkbox labeled 'Shift with break' is present. Below this is a 'Break in shift' section with a text input. An orange 'Submit' button is located at the bottom right of the form. Underneath the form is a table titled 'List of shifts' with the following columns: 'Description', 'Start of shift', 'End of shift', 'Start of break', 'End of break', 'Break duration', and 'Delete'. The bottom of the interface has a green bar with 'Send Log »' on the left and 'Logout »' on the right.

Image 6: Add new shift

- With the option "Start of break" and "End of break" is defined as the period during which a worker could use a break.
- "Duration of break" is a period break and every absence which exceeds the length of the pause time is recorded as unpaid leave.

2.5. Assign card ID

A system that will allow each new ID card that you register in our system in a simple and easy way to be assigned to an employee. Selecting “add employee” moves to the page to fill in the basic data for the employee.

Image 7: Assign card ID

2.6. Department

The option to create and review the entered departments. After entering the name of the new department, its input must be confirmed by clicking on the "**Submit**". In the right window is a part reserved for a list of existing departments and the number of employees. The lower part of this page shows the structure of each department and the functions for adding and subtracting workers from selected department. To make addition of employee to department you must first choose employee and department to which you want to attach employee, and then choose Add. After that occurs info panel on which you should confirm the selection. A process for the separation of the worker from the Department is the same except that it is performed by selecting the function Remove.

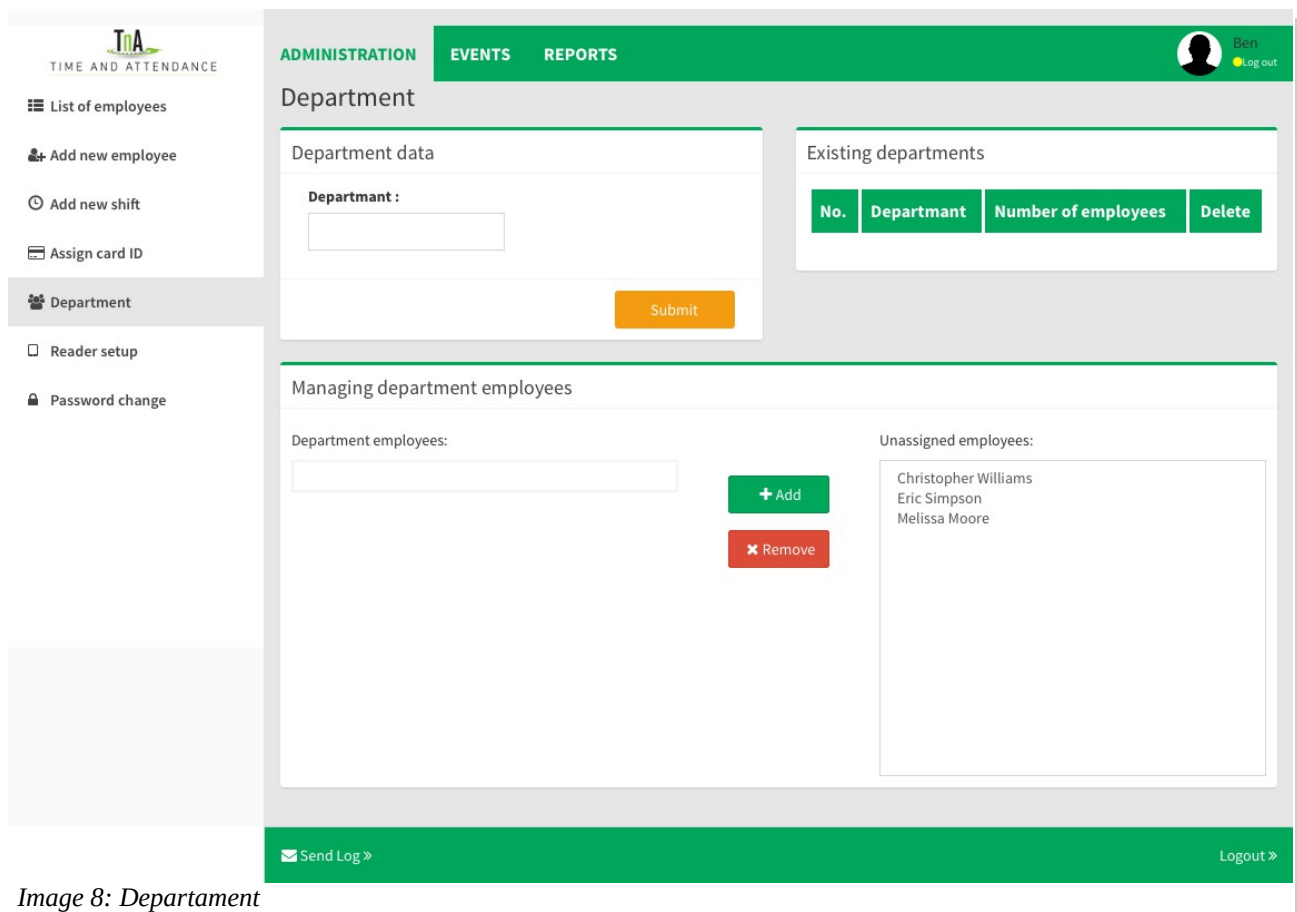

Image 8: Department

2.7. Reader settings

This option is for adding and adjusting devices that are used in your system. Within the setting, each reader is assigned a unique ID number that is later used to identify when sending events to the data base, for recording **Arrival / Departure** at work.

To read time of arrival and departure from work properly and recorded in the system is of crucial importance that when input data of new device in the system make the correct choice of the type of reader - Option "Reader type". The basic version, which has a fully automated process of adding Android devices and additional settings in this section may be necessary for systems with multiple devices for recording events. In the lower part there is a table with a list currently active readers and their settings.

Image 9: Reader setup

2.8. Password change

Extremely simple and clear function that allows you to change the password when needed.

The screenshot displays the 'Change password' interface of the TNA (Time and Attendance) system. The interface features a green header bar with navigation tabs: 'ADMINISTRATION', 'EVENTS', and 'REPORTS'. A user profile icon labeled 'ben' with a 'Log out' link is positioned in the top right corner. On the left, a sidebar lists various administrative functions: 'List of employees', 'Add new employee', 'Add new shift', 'Assign card ID', 'Department', 'Reader setup', and 'Password change' (which is currently selected). The main content area is titled 'Change password' and contains a 'Passwords' section with three input fields: 'Old password: *', 'New password: *', and 'Confirm new password: *'. An orange 'Submit' button is located to the right of these fields. At the bottom of the interface, a green bar contains a 'Send log »' link on the left and a 'Log out »' link on the right.

Image 10: Password change

3.1. Events

Menu, which consists of two sub-options:

3.2. **Manual entry** 3.3. **Days off**

3.2. Manual entry

By using this option it is possible to create a manual input events in the database. This option is only used in cases when it is necessary to make a correction of the entered time and events. Conformation of selection will be done by pressing submit button.

The screenshot shows the 'Manual entry' form in the TNA system. The form is divided into two main sections: 'Event data' and 'Date and time selection'. In the 'Event data' section, there are three dropdown menus: 'Employee' (selected: 1274639901078144 - Moore Melissa), 'Event type' (selected: Arrival), and 'Event description' (selected: Regular). The 'Date and time selection' section features a calendar for January 2016 and a 'Time' input field set to 16:22. A green 'Submit' button is located at the bottom right of the form. The interface also includes a sidebar on the left with 'Manual entry' and 'Days off' options, and a top navigation bar with 'ADMINISTRATION', 'EVENTS', and 'REPORTS' tabs. At the bottom, there is a green bar with 'Send log >' and 'Log out >' links.

Image 11: Manual entry

3.3. Days off

Under this option it is possible to define absences from work through the following events: vacation, sick leave, holidays, paid leave - as well as the number of hours that will be tied to a specific event. Operating hours are entered in the event that employee is working part-time and need to be assigned four rather than eight hours as full time. It is also possible to add the holiday or day off for the entire departments by selecting it properly and confirming on submit button.

In the lower part of the window is option for creating list of days off for employees. This list is supported by the ability to erase the incorrect choice of days off and then confirming choice made correctly.

4.1. Reports

For all entered data and recorded events TNA software enables users to create appropriate reports in charts or tables, within which there is a clear display of engaging workers.

4.2. Currently present

The report provides an overview of currently present employees in real time. Within the plot of this report workers who are present are marked green while absent are marked in orange. Also any time you can refresh the current status and verify the information on the present workers by push of button “Refresh”. Workers are classified by department to which they have been assigned so it is easy to examine the current state in every department. For every worker is showing the date and time of the last recorded entry or exit.

The screenshot displays the TNA software interface for the 'Currently present' report. The interface includes a top navigation bar with 'ADMINISTRATION', 'EVENTS', and 'REPORTS' tabs. A sidebar on the left provides navigation options, with 'Currently present' selected. The main area shows a list of currently present employees, categorized by department. The 'Marketing' department lists two employees: Melissa Moore and Eric Simpson. The 'R&D' department lists one employee: Christopher Williams. Each employee card shows their last recorded entry or exit time, their photo, and their card number. A 'Refresh' button is available to update the data.

Image 12: Curently present

4.3.1. Individually reports

This option allows you to create individual reports for selected employee in a defined time period (maximum period shall not be longer than 30 days). Clicking on the button "submit", the user confirms the entered data and starts generating a single report.

The screenshot displays the TNA web application's 'Individual' report generation page. The interface is divided into a sidebar and a main content area. The sidebar on the left contains the TNA logo and navigation links: 'Currently present', 'Individual reports' (selected), 'Department', 'Overtime reports', and 'Delay report'. The main content area has a green header with 'ADMINISTRATION', 'EVENTS', and 'REPORTS' tabs. Below the header, the title 'Individual' is shown. The 'Report data' section includes a 'Select an employee' dropdown menu with the value '1274639901078144 - Moore Melissa' and a 'Tip prikaza' dropdown menu with the value 'Period'. To the right, the 'Date range selection' section features two calendar views for 'December 2015'. The 'Start date' calendar shows the 1st of December highlighted, and the 'End date' calendar shows the 30th of December highlighted. A green 'Submit' button is located at the bottom right of the date selection area.

Image 13: Reports individually

Graphic within the report is created based on the data from the database and as such represents a useful tool for the control of work engagement of employee. As part of this report is a complete analysis of working hours for selected employee. The top part of the chart shows a table with the basic data for employee and all sums to the existing parameters of working time and picture of employee. Also it is possible to replace the period for which the observed results by choosing options month, week or day on the right side of header or use the navigation arrows located on the left side. A useful feature is the creation of a PDF document on the basis of graphic reports. On the bottom of the report is a legend in which are detailed models graphical display of time on a graphic.

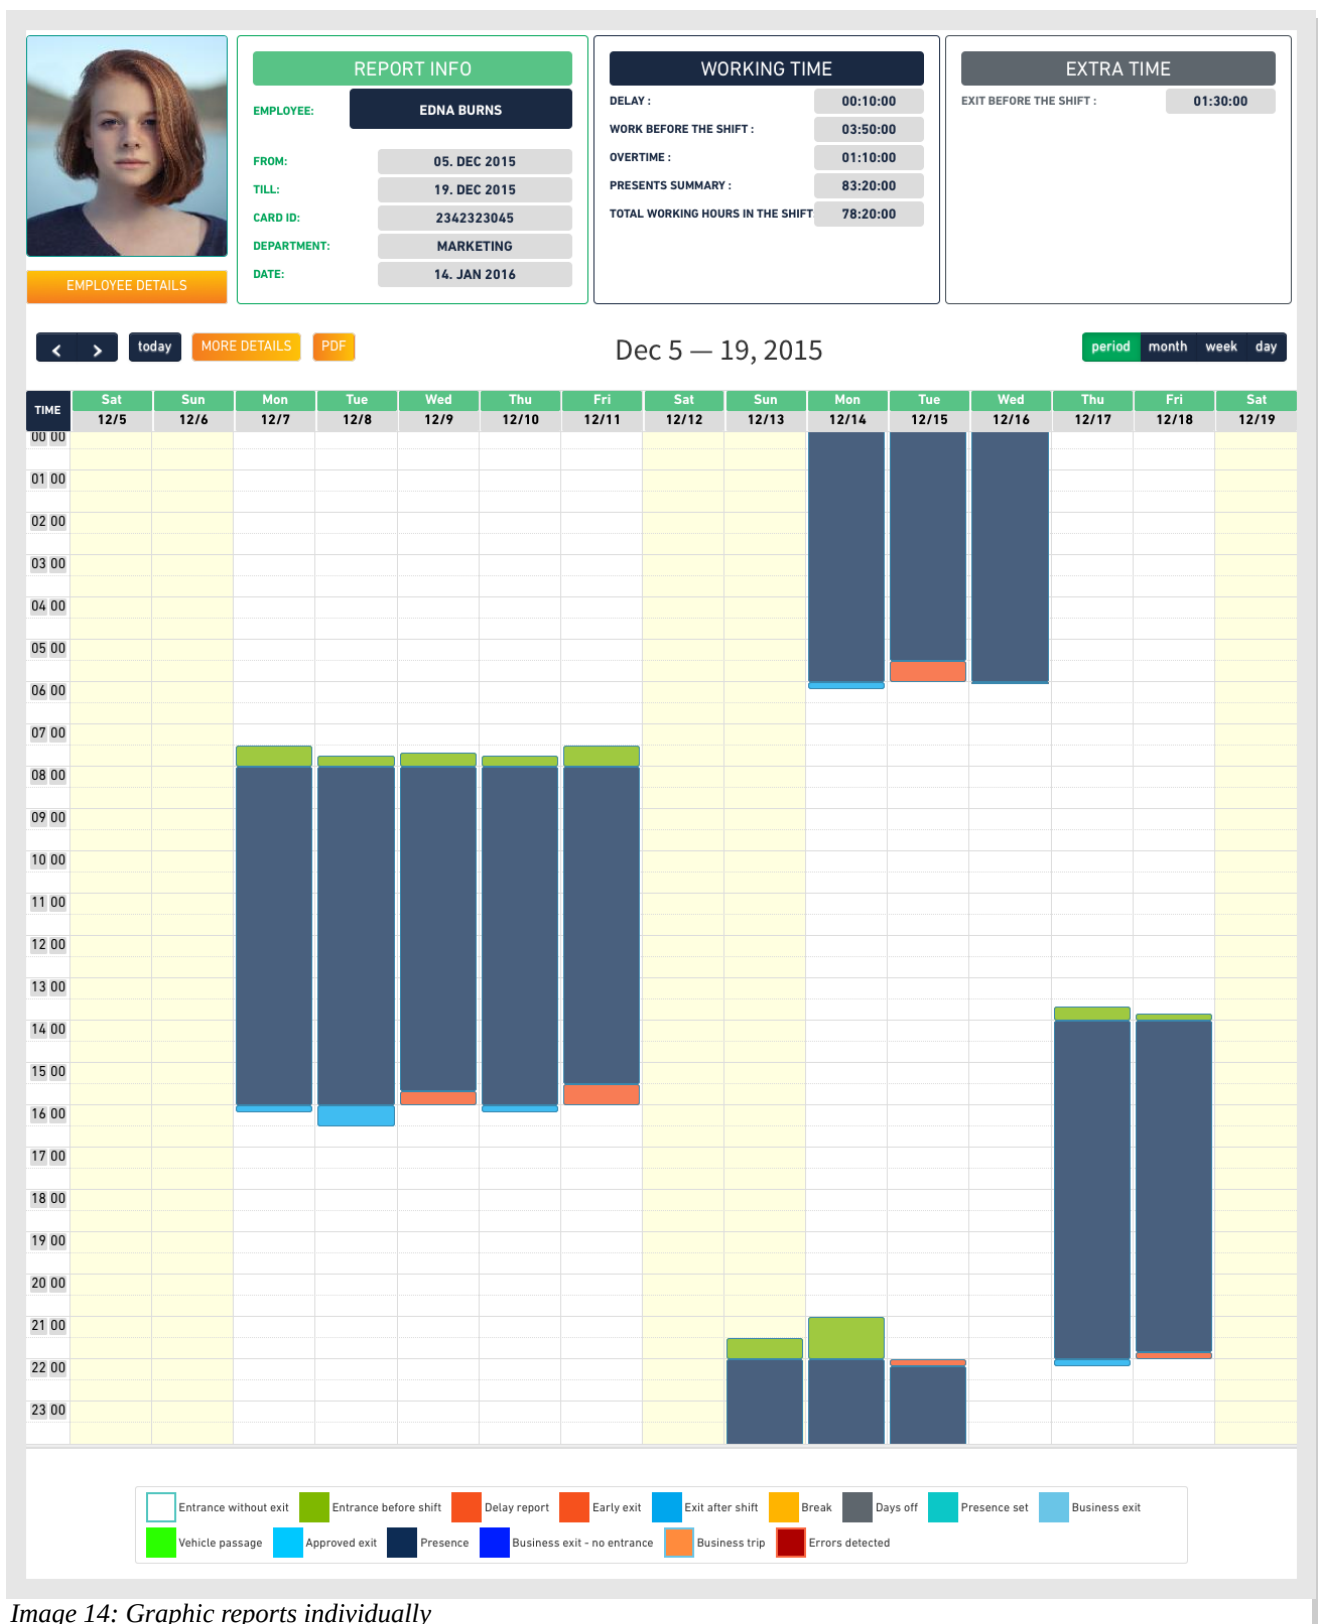

Image 14: Graphic reports individually

4.3.2. Automatic detection of shifts

One of the most complex functions of the software for time attendance implies the ability to detect shifts in which the employee worked, especially if there is exactly perpetuity shift schedule or there is overtime, before or after the official duration of the shift.

Solutions that most similar softwares offered are based on the input of special templates with defining all possible shifts in which a worker can work, for each worker individually. This solution is not practical due to possible changes of schedule and duration of the shift, as well as the already mentioned overtime that can easily lead to false detection of shifts. All to often involves painstaking changes, analysis and correction of reports on the time spent, as with a larger number of workers can be a big problem for the HR department.

Our software for time attendance based on advanced algorithms for analysis and detection of shifts in which the worker was hired without the need for entering all the possible combinations of shifts can be hired. All you need is to detect the arrival time workers on the job and the time of his departure from work and software will detect where the shift worker was engaged, regardless of whether his involvement was pre-planned or had overtime.

In this way, workers are protected in the event that the absence of the pre-defined shift ran as a failure or delay to these workers, although there is a real need.

On the other hand protected and that the employer at any time within the report can see exactly how much the duration of regular and overtime workers, regardless of the predefined schedule and duration of the shift.

A simple example is shown in image 14 and presents a report in which the employee is several times deviated from the standard scheme of work in shifts.

4.4. Department

This option provides the ability to create a series of individual reports that were previously described for the entire department. Thus greatly saves time especially when creating accounting reports at the end of the month.

4.5. Overtime reports

In the basic version TNA web applications, there is a report on overtime workers, and report on the presence of worker outside of normal business hours. In the main screen is made user choice, worker for whom the report is made, and the time period to which the report relates (start date, end date).

The screenshot displays the 'Presence overtime' report form in the TNA web application. The interface consists of a sidebar on the left, a top navigation bar, and a main content area.

Image 16: Overtime reports

Under this option it is important to adjust the value for "presence overtime", which is the time margin for duration of working time and is related to the arrival and departure from the workplace. If the workplace is located at some distance from the place where the recording is done with the help of this option you can specify the time it takes a worker to come to his workplace or the factory gates at the exit. In this way, the defined time "presence overtime" shall not be counted as overtime.

Example: If a worker is set "presence overtime" for 10 minutes after his arrival nine minutes earlier will not be recorded as overtime, or check-out that occurred 9 minutes after hours. If a worker checks out 11 minutes later, all 11 minutes he will be counted as overtime.
